# Wet waste compactor with pendulum compaction plate

## Versatile and effective

PRESTO wet waste compactors can be used wherever organic waste such as fruit and vegetables or any waste with a large water content is generated.

A swinging compaction plunger that is firmly connected with the container compacts the material. The feeding opening is especially low to facilitate feeding the PRESTO wet waste compactor.

## Easy and safe

Reliable function and user-friendliness go without saying for all PRESTO products. Not only in operation, but also in terms of integration into the working environment.

The use of a PRESTO wet waste compactor does not require any special construction work. An electrical power supply is all that is necessary for putting it into service.

## Carefree disposal

The reuse of recycling material or disposal of waste is an important task in the business activities of many companies.

Our long-standing experience in environmental technology and our most modern development and production methods allow us to manufacture products which our customers use as a functional and cost-efficient link in the chain of recycling material compaction and disposal.

## Tailored for customer needs

Wherever various moist or wet materials are generated and need to be disposed PRESTO wet waste compactors can be used.

A large choice of accessories allows us to meet all customer-specific requirements.

We develop your individual optimum solution for your disposal problem.

Talk to us !

## Features and benefits

- The particularly low feeding opening and the foldable hook (PHR version) offer maximum feeding comfort.
- The drive elements and bearings are located on the outside and do not get into contact with the waste material. Low-maintenance operation is ensured.
- The plunger swings in its bearing and is self-cleaning. A cleaning opening is not necessary. The large aggregate cabinet ensures service-friendly access.
- The rib-free structure offers you large advertising space.
- Since the design is absolutely water-tight the installation site cannot be soiled by any leaking liquids.
- The central locking system is operated from one side, so the emptying hatch can be opened safely and quickly.

## Guaranteed powerful performance

The bent corner profiles ensure particular stability and the elegant rounded corner design. The robust, continuously welded steel construction prevents rust creep.

High-quality components ensure reliable function, low maintenance and quiet operation < 70 dB (A).

Handling is easy, a foundation is not required, and the unit can be put into service immediately.

Of course our paints are lead and chromium free, and you can select the colour of your choice.
